Module assessment passed

Great job! You passed the module assessment.

Score: 100%

i AI-generated content The questions and answer choices in this module assessment were generated using AI and reviewed by a human author.

[Provide feedback](#)

1. Your team is reviewing a pull request that includes several critical updates. What should be the primary focus during the pull request review process on GitHub? *

☐ Checking that all commit messages are properly formatted.

☒ Ensuring the code changes meet project requirements and do not introduce new bugs.

✓ Correct

☐ Verifying that the repository's visibility settings are correct.

2. What is the primary function of a GitHub repository? *

☒ To manage project files and track their revision history.

✓ Correct

- ☐ To host discussions and community engagement.
- ☐ To automate code deployment processes.

3. What is a benefit of customizing notification settings on GitHub? *

- ☐ It automatically unsubscribes you from all repository notifications.
- ☒ It allows you to stay informed about specific activities without being overwhelmed by irrelevant updates. ✓ Correct
- ☐ It enables automatic deletion of old notifications.

4. You encounter an issue where a newly added file in your GitHub repository isn't reflecting the latest changes after a commit. What might be the cause of this problem? *

- ☐ The file was not properly staged before committing.
- ☒ The changes were committed to a branch that hasn't been merged. ✓ Correct
- ☐ The repository visibility settings are set to private.

5. Your team is considering using GitHub Discussions for project announcements. What is the advantage of using Discussions for this purpose over Issues? *

- ☒ Discussions allow for open-ended conversations and engagement beyond specific tasks. ✓ Correct
- ☐ Discussions are automatically linked to pull requests for better tracking.
- ☐ Discussions require less permissions to access compared to Issues.

6. You need to create a new file in your GitHub repository for a project that requires multiple directories. What is the correct method to specify subdirectories when adding a new file? *

- ☐ Create each directory individually before adding the file.
- ☐ Use the 'Add directory' command in the GitHub UI.
- ☒ Use the '/' directory separator in the file name. ✓ Correct

7. How do pull requests contribute to the GitHub flow during collaboration? *

- ☐ They create a backup of the development branch.
- ☐ They automatically resolve conflicts between different branches.
- ☒ They provide a structured way to propose and review changes before merging into the main branch.

✓ Correct**8. Why might a GitHub Discussion be more appropriate than an Issue for certain topics? ***

- ☒ Discussions facilitate open-ended conversations and community engagement.
- ☐ Discussions automatically track progress on project tasks.
- ☐ Discussions provide automatic notifications for all participants.

✓ Correct**9. Which action is necessary for adding a file to a GitHub repository? ***

- ☒ Having write access to the repository.
- ☐ Having read access to the repository.
- ☐ Being a repository owner.

✓ Correct
